INTERMATIC WP SERIES INSERT INSTRUCTIONS

The enclosed insert is to be used with Intermatic WP Series weatherproof receptacle covers-models WP1020 or WP1030. A standard duplex receptacle insert and a standard GFCI insert are included with the aforementioned models. The enclosed insert is to be used for other than single duplex or single GFCI applications. This insert, as well as the duplex and GFCI inserts included with the receptacle covers, are designed to be mounted either vertically or horizontally depending on the application requirements. The fact that the inserts are designed to be rotated 90 or 180 degrees also provide you the flexibility, for 2 gang mount with two different devices, of selecting which side the selected devices should be on. For example; a toggle switch/GFCI combination can be mounted so that the toggle switch is on the left OR right side of the junction box. For mounting the receptacle cover, refer to the instruction sheet enclosed with the receptacle cover.

Listed below are the inserts currently available with model numbers, a brief description of the application and a list of additional hardware and gasket (if required) for each insert. Inserts with no hardware and/or gasket, use the hardware and/or gasket with models WP1020 and WP1030.

ADDITIONAL HDWE.

(You may not need all screws provided)
