

## **Product Specification**

## Part No.: SCD-009

- 1) Rating: DC 30V 0.3A
- 2) Operating Temperature Range: -10°C ~ +60°C
- **3) Electrical Performance:**

|                       | Test Conditions                     | Performance                    |  |  |
|-----------------------|-------------------------------------|--------------------------------|--|--|
| Contact Resistance    | Measured at small current (10mA     | $50 \mathrm{m}\Omega$ Max.     |  |  |
| Contact Resistance    | 1000Hz or less)                     |                                |  |  |
| Insulation Resistance | Apply a voltage of 500V DC          |                                |  |  |
|                       | shall be applied for 1 minute after |                                |  |  |
|                       | which measurement taken:            |                                |  |  |
|                       | (1) Between terminals not to        |                                |  |  |
|                       | be contact                          | $100 M\Omega$ Min.             |  |  |
|                       | (2) Between body and                | 10010122 101111.               |  |  |
|                       | terminal                            |                                |  |  |
|                       | (3) Between terminals not to        |                                |  |  |
|                       | be contact when plug is             |                                |  |  |
|                       | inserted                            |                                |  |  |
| Dielectric Strength   | AC500V rms (50-60Hz) for 1          |                                |  |  |
|                       | minute trip current: 0.5mA          |                                |  |  |
|                       | (1) Between terminals not to        |                                |  |  |
|                       | be contact.                         | Without damage to parts arcing |  |  |
|                       | (2) Between body and                | or breakdown                   |  |  |
|                       | terminal                            | of breakdown                   |  |  |
|                       | (3) Between terminals not to        |                                |  |  |
|                       | be contact when plug is             |                                |  |  |
|                       | inserted.                           |                                |  |  |

## 4) Mechanical Performance:

|                   | Test Conditions   | Performance  |
|-------------------|---|--|
| Insertion Force   | Measurement shall be made after 3<br>times of insertion and extraction with<br>gauge plug   | 300~800 gf   |
| Extraction Force  | Measurement shall be made after 3<br>times of insertion and extraction with<br>gauge plug   | 300~1200 gf  |
| Terminal Strength | A static load of 150gf shall be applied<br>to the terminal for 15 seconds in any<br>direction                                     | Electrical characteristics shall be<br>satisfied without damage or<br>excessive looseness of terminals                                   |
| Life Test         | Endurance without load:<br>Jack shall be subjected to 5,000<br>cycles at a rate of 15 to 18 cycles per<br>minute without loading. | <ol> <li>Contact resistance: 100mΩ<br/>Max.</li> <li>Insulation Resistance: 50MΩ<br/>Min.</li> <li>Withstand Voltage: AC 500V</li> </ol> |

Vimex International Corp.

Product Specification Report ID: vc115/cc2506/r1

|   | (4) | for 1 minute.<br>Without damage to parts<br>arcing or breakdown. |

| • |     |  |

## 5) Environmental Characteristics:

| 5) Environmental ena           | Test Conditions                             | Performance                         |  |
|--------------------------------|---|-------------------------------------|--|
| Solderability Test             | The top of terminals shall be               | The Area of soldering should be     |  |
|                                | dipped 2mm in the solder bath of            | over 75%                            |  |
|                                | 260±5°C for 3±0.5 seconds                   |                                     |  |
|                                | Solder iron method: temperature             | Without deformation of case or      |  |
| Resistance to Solder Heat Test | of solder 260±5°C. Time of                  | excessive looseness of terminals    |  |
|                                | solder 3±0.5 sec.                           | electrical characteristics shall be |  |
|                                |   | satisfied.                          |  |
|                                | The jack shall be stored at a               |                                     |  |
|                                | temperature of $-25 \pm 3^{\circ}$ C for 48 |                                     |  |
|                                | hours, then the switch shall be             |                                     |  |
| Cold Test                      | maintained at standard                      |                                     |  |
|                                | atmospheric conditions for 1 hour           |                                     |  |
|                                | after which measurement shall be            |                                     |  |
|                                | made  | There shall be no deformation or    |  |
|                                | The jack shall be stored at a               | cracks in the molded part.          |  |
|                                | temperature of 70±2°C for 48                |                                     |  |
|                                | hours, then the jack shall be               |                                     |  |
| Heat Test                      | maintained at standard                      |                                     |  |
|                                | atmospheric conditions for 1 hour           |                                     |  |
|                                | after which measurement shall be            |                                     |  |
|                                | made.                                       |                                     |  |
|                                | The jack shall be stored at a               |                                     |  |
|                                | temperature of 40±2°C and a                 |                                     |  |
|                                | humidity of 90% to 98% for 48               |                                     |  |
| Humidity Test                  | hours, then the jack shall be               | There shall be no deformation or    |  |
|                                | maintained at standard                      | cracks in molded part.              |  |
|                                | atmospheric conditions for 1 hour           |                                     |  |
|                                | after which measurement shall be            |                                     |  |
|                                | made.                                       |                                     |  |
| Te                             | est Condition (Unless otherwise specifi     | ied)                                |  |
|                                | Temperature: 5°C - 35°C                     |                                     |  |
|                                | Humidity: 45% - 85% R.H.                    |                                     |  |
|                                | Pressure: 86 – 106kPa                       |                                     |  |
