Tube Driver - Interstage 124 Series

Features

- Designed for general purpose or replacement use in push-pull or phase inverter tube driver circuits.
- Should not be used for single ended applications. They have no gap for DC bias current present in SE mode.
- Open style with minimum 5" long primary leads.
- Minimum frequency response 150 Hz. - 15 kHz (+1 /- 3db) @1 kHz.
- Our part number **124B** is the same as our **124A** except for 49% Nickel laminations for greater fidelity.
- Our part number **124C** (below) is the COIL ONLY (for those experimenters who want to use their own "iron").
- If you are looking to replace Radiola III-A audio transformers, check out our **universal radiola replacement unit**.

Hookup Data

- For Parallel connected operation (33.8K Ohm Secondary):
 - Connect the GRN/YEL wire to the GRN wire AND the BLK/YEL wire to the BLK wire.
- For Series connected operation (135K Ohm Secondary):
 - Connect the BLK/YEL wire to the GRN (this becomes the center tap) - GRN/YEL and BLK wires are the output.
